

Renzo Luis Battaglini

Full Stack Developer

Córdoba, Argentina · renzo@battaglini.dev · renzojmp@gmail.com · battaglini.dev · linkedin.com/in/renzobxt
· github.com/Naghell

SUMMARY

Full Stack Developer specialized in TypeScript, with end-to-end experience across web products and fintech. Currently at Lannis, building a tax settlement and e-invoicing platform on a Next.js + Node.js monorepo with Prisma and PostgreSQL, along with third-party integrations and fiscal data pipelines. Product-minded profile: feature design, PRD writing and technical ownership of projects.

EXPERIENCE

Full Stack Developer — Lannis

June 2025 – Present

Fintech platform for tax settlement and electronic invoicing in Argentina, built as a Next.js + Node.js monorepo on Prisma and PostgreSQL.

- Broad hands-on experience with ARCA, Argentina's national tax authority: both at the operational level, covering the fiscal procedures taxpayers go through, and across its web services
- Technical lead of the Clover (POS) integration: OAuth 2.0 connection flow, synchronization of orders, line items and payments, and the monthly sales ledger that feeds the tax-return engine
- Built the monthly turnover-tax (IIBB) settlement engine for local and Convenio Multilateral taxpayers: taxable base by document type, credit notes, USD to ARS conversion, advance payments, carry-forward balances and special regimes, covered by an E2E test suite
- Electronic invoicing through ARCA's official web services (SOAP API): issuing, credit and debit notes, document rules engine, VAT breakdown by rate, export invoices and CAE error handling
- Fiscal data ingestion pipelines: headless workers running queue-backed idempotent jobs with retries, backoff and cancellation handling, plus CSV/PDF parsing, normalization and document storage
- Fiscal permissions and delegations module: monthly and weekly cron jobs for provisioning and cleanup, company-administrator data model and the PRD for the full flow
- Data modeling with Prisma over PostgreSQL, technical planning and PRD writing, and roadmap management in Linear

Full Stack Developer — Edison

July 2023 – July 2025

Argentine edtech startup running short-format courses taught by industry leaders.

- Migrated course landing pages, a marketplace and a checkout system from no-code tools to full-code applications with React/Vite, later moved to Next.js
- Integrated payment providers: Stripe, MercadoPago (Checkout API with installments) and dLocal
- Built the first internal API with NestJS and MariaDB on AWS RDS, including a centralized response service (error handling, pagination, per-model filtering)
- Built a dynamic Prisma module that auto-generates CRUD operations across models with configurable per-model filters
- AWS infrastructure: hosting, RDS, Lambda serverless functions and CI/CD pipelines with CodePipeline and CodeBuild

SELECTED PROJECTS

Habita — Property management platform for real estate agencies: contracts with indexed rent adjustments, receipts for tenants and owners, commission tracking and a monthly balance dashboard. Bun monorepo, Next.js +

Hono, PostgreSQL with row-level security.

Comunidad Reborn — comunidadreborn.net — Website for a gaming community: Steam OpenID login, live server status and a storefront wired to Tebex. Next.js and Supabase.

battaglino.dev — Personal portfolio and blog. Astro and Tailwind CSS, bilingual, light and dark theme.

SKILLS

Languages: TypeScript, JavaScript, Lua, Java

Frontend: React, Next.js, Astro, Redux / RTK, Tailwind CSS, SCSS

Backend: Node.js, NestJS, Fastify, Express, Bun

Data: PostgreSQL, MySQL / MariaDB, Redis, Prisma, Sequelize

Infrastructure: Docker, GitHub Actions, AWS (RDS, Lambda, CodePipeline), Google Cloud

Integrations: ARCA web services (SOAP), Clover, Stripe, MercadoPago, dLocal, Clerk

Testing: Unit, integration and E2E (Playwright)

Analytics and messaging: Amplitude, Hotjar, Microsoft Clarity, Mixpanel, MailerLite, Botmaker, Meta API

Automation and tooling: n8n, Make, Zapier, Airtable, Linear, Figma

EDUCATION

- Systems Engineering — Universidad Tecnológica Nacional, FRC. 2020–2022 (two years completed).
- Full Stack Web Developer — SoyHenry Bootcamp. 700 hours of coursework and practice, 2023.
